

Lennoxville Elementary School  
Curriculum Outline - Cycle 2

**Language Arts:**

The Language Arts program is based on a child centered, integrated approach to the teaching of Language Arts. This approach sees the children using language in a natural, purposeful and meaningful way. Throughout this program, the children are encouraged to actively engage in the processes of speaking, listening, reading and writing through the use of various texts and digital programs.

Science and CCQ is integrated into the Language Arts program.

**Science:**

Science is taught in English using the Flash of Genius Workbook. Through different experiences and experiments students will learn to propose explanations for or solutions to scientific problems.

**Math:**

Cycle 2 uses the Numbers Workbook and the Numbers digital program. The teaching of mathematics is based on child centered experiences, using manipulatives, connections to real life examples, and problem solving. Small group work, math talks and discussions are a part of our daily math classes.

**French:**

The school offers one level of French: Français, langue seconde. Through independent work centers, guided reading, written assignments and active participation students will learn to develop their oral, reading and written abilities in French. Evaluation: In line with the Quebec Education Program, the children will be evaluated based on the student's mastery of the learning competencies. The students will complete the workbook, Ensemble en français over the two years of the cycle.

**Social Studies:**

The main goal of this program is to lead the pupils toward a deeper understanding of the world around them and of their role in it. Students will be evaluated based on their ability to locate themselves in space, time as well as their understanding of different cultures. Social Studies will be integrated with French.
